

SafeHarbor

AI Gambling Addiction Consulting Agent

Claude API

React + JSX

Weekend Build

Resume-Ready

What makes this unique

Existing tools	SafeHarbor
Bloomberg / Westlaw — you search them	Agent monitors and comes to YOU proactively
Chatbots give generic advice	Country-specific legal guidance (6 countries)
No crisis detection	Keyword crisis detection + instant helpline surface
Separate emotional vs. legal products	Full-stack: counseling + legal + financial in one

Core features

Proactive nudge system	After 60s of user silence, the agent sends a warm check-in unprompted — true agent behavior, not just Q&A.;
Crisis detection	Every message is scanned for 9 distress signals. When triggered, crisis helplines surface instantly in a banner.
Country-aware legal guidance	Supports Sweden (Spelpaus), UK (GamStop), US, Australia, Germany, Ireland — auto-selects self-exclusion and helpline info.
Motivational interviewing	System prompt is engineered to validate before advising, ask one question at a time, and never shame or lecture.
Personalized onboarding	Name + country collected before session — agent uses both in every response for a personal feel.
Quick action triggers	Four pre-built prompts surface early to reduce friction for users scared to speak first.

Tech stack

Layer	Technology	Purpose
Frontend	React (JSX) + Tailwind CSS	Chat UI, onboarding, nudge banners
AI Brain	Claude Sonnet (claude-sonnet-4-20250514)	Counseling + legal reasoning

Agent Loop	Custom JS agentic loop	Proactive nudges, crisis detection, state mgmt
Deployment	Vercel (free tier)	Production hosting, instant deploy
Backend (v2)	Next.js API route	Secure API key management

Weekend build plan

Day 1 — Core agent

- Set up React project + Tailwind
- Build onboarding screen (name + country)
- Wire up Claude API with specialized system prompt
- Implement crisis keyword detection + banner
- Add country-aware legal context to agent

Day 2 — Polish & deploy

- Build proactive nudge timer (60s silence trigger)
- Add quick action buttons for common topics
- Style chat bubbles, header, helpline display
- Move API key to Next.js backend route
- Deploy to Vercel, record a short demo GIF
- Write README with architecture diagram

Resume bullet

Built **SafeHarbor**, an AI gambling addiction consulting agent using Claude API + React — combines motivational counseling, country-specific legal guidance (self-exclusion programs, debt rights) across 6 countries, proactive check-ins, and real-time crisis detection. Deployed on Vercel.

Next steps to scale

Add conversation persistence	Supabase or SQLite to store sessions across visits
Therapist directory integration	Psychology Today API to surface real local professionals
Multi-language support	Swedish, German — key for the target markets
SMS nudges	Twilio integration for daily check-in texts
Analytics dashboard	Track recovery milestones, urge frequency over time
